

TimeClock Plus[®] Standard

The New **Standard**

TimeClock Plus Standard is designed for growing organizations like yours, with intuitive timekeeping measures in place for both management and employees. For instance, employees can clock in and out using the WebClock application and managers can edit employee time, all from the convenience of their favorite web browsers.

Employees that don't have access to a computer can use Remote Data Terminals as an alternative way to record time. Remote Data Terminals offer all of the functions of a standard time clock, with the added functionality of many employee self-service features.

*User and employee restrictions may apply

Biometric Compatibility

TimeClock Plus Standard is fully compatible with all of our biometric products – including fingerprint and handscan devices – which is great for eliminating any “buddy punching” that can affect your organization’s bottomline.

TimeClock Manager

TimeClock Manager provides the ability to add employees, edit time, and even transfer data to payroll through one of our interface modules. The managers and supervisors in your organization have access to employee information to control labor costs and overtime within TimeClock Manager. Time tracking tools, such as “Employee Status,” offer management a “real-time” snapshot of who is clocked in, what time they arrived, and what task they are performing now.

TimeClock Scheduler

TimeClock Scheduler allows you to create employee schedules to help track tardies and absences, restrict or round employees' clocked hours, and run a wide variety of reports (such as the Scheduled vs. Actual Hours Report or the Schedule Variance Report).

WebClock

The WebClock allows employees to clock in and out, view hours, and change job with just a few clicks of the mouse – and it's all done right from a kiosk or the employees' own computers.

Real-Time Application

Since TimeClock Plus is a “real-time” application, employees can view their hours immediately, and managers can have real-time attendance reporting. This gives supervisors access to up-to-the minute employee labor info, saving your organization time and money. Installation is simple if you choose an onsite license, however, our OnDemand service makes the software easy to maintain and stay current with the latest features.
